Edited by David Travers, University of Lancaster, UK

*Series: Critical Concepts in Political Science*

The United Nations: the second greatest experiment in the twentieth century that has attempted to prevent war and further international cooperation in the political, economic, social and technical fields.

Covering the six principal organs of the United Nations: the Security Council, the General Assembly, the Economic and Social Council, the Trusteeship Council, and the International Court of Justice, the collection explores the original conception of the United Nations, how it has evolved, how it works, and how effectively it has prevented and resolved disputes and contributed to international cooperation.

Some of the subsidiary bodies established by the General Assembly and the Security Council, including human rights treaties, tribunals, international financial institutions and commissions, are also included.
