# Invitation to Authors

Are you planning to develop a professional book, textbook or monograph in Communication Disorders? Do you feel there is a need for a new journal in this area? If so, we would like to hear from you. We welcome proposals for theoretical or practical treatments of any aspects of Communication Disorders.

Please send proposals to:

**UK/Europe/ROW:**
Lucy Kennedy, Senior Editor  
book.proposals@psypress.co.uk

**US/Canada:**
Paul Dukes, Publisher  
us.book.proposals@psypress.com

Therapeutic Processes for Communication Disorders

A Guide for Clinicians and Students

Robert J. Fourie (Ed.)
University College Cork, Ireland

“Robert Fourie has brought together a group of leading thinkers in the field of clinical theory, who bring to life concepts that are at the unspoken heart of Speech and Language Therapy. Students, clinicians and researchers will, in equal parts, be informed and inspired.” - Andrew Whitehouse, Telethon Institute for Child Health Research, University of Western Australia

Authors in the fields of communication disorders analyze the psychological, social and linguistic processes and interactions underpinning clinical practice, from both the client and clinician perspectives. The chapters demonstrate how it is possible to analyze and understand client–clinician discourse using qualitative research, and describe various challenges to establishing relationships such as cultural, gender and age differences. The authors go on to describe self-care processes, the therapeutic use of the self, and various psychological factors that could be important for developing therapeutic relationships. While this book is geared toward the needs of practicing and training speech, language and hearing clinicians, other professional such as teachers of the deaf, psychotherapists, nurses, and occupational therapists will find the ideas relevant, interesting and easily translatable for use in their own clinical practice.

The Handbook of Psycholinguistic and Cognitive Processes

Perspectives in Communication Disorders

Jackie Guendouzi, Cardiff University, UK; Filip Loncke, University of Virginia, USA; Mandy J. Williams, University of South Dakota, USA (Eds.)

“The editors of this handbook have superbly managed to embed the study of speech and language disorders in state-of-the art psycholinguistics and cognitive science. Some 70 authors, leaders in their field from both sides of the Atlantic, jointly produced a text which is unmatched in its broad, interdisciplinary perspective. It will be indispensible not only for students of communication disorders, but also for all psycholinguists who realize that the phenomena of dysfunctioning are as relevant to their science as is normal language processing.” - Willem J.M. Levelt, Max Planck Institute for Psycholinguistics, The Netherlands

This handbook includes an overview of those areas of cognition and language processing that are relevant to the field of communication disorders, and provides examples of theoretical approaches to problems and issues in communication disorders.

The first section includes a collection of chapters that outline some of the basic considerations and areas of cognition and language that underlie communication processing; a second section explains and exemplifies some of the influential theories of psycholinguistic/cognitive processing; and the third section illustrates theoretical applications to clinical populations.

There is coverage of theories that have been either seminal or controversial in the research of communication disorders. Given the increasing multi-cultural workload of many practitioners working with clinical populations, chapters relating to bilingual populations are also included.

This book provides a single interdisciplinary source where researchers and students can access information on psycholinguistic and cognitive processing theories relevant to clinical populations. A range of theories, models, and perspectives are provided. The range of topics and issues illustrate the relevance of a dynamic interaction between theoretical and applied work, and retains the complexity of psycholinguistic and cognitive theory for readers (both researchers and graduate students) whose primary interest is the field of communication disorders.

Phonology for Communication Disorders

Martin J. Ball, Nicole Müller, University of Louisiana at Lafayette, USA; Ben Rutter, University of Oklahoma Health Sciences Center, USA

“The writing style provides a clear portrayal of the theoretical concepts. It would be most valuable for students or practitioners of speech-language pathology.” - Helen Henshaw, National Biomedical Research Unit in Hearing, University of Nottingham, in The Psychologist

This textbook describes the approaches to phonology that are most relevant to communication disorders. It examines schools of thought in theoretical phonology, and their relevance to description, explanation and remediation in the clinical context.

A recurring theme throughout the book is the distinction between phonological theories that attempt elegant, parsimonious descriptions of phonological data, and those that attempt to provide a psycholinguistic model of speech production and perception.

This book introduces all the relevant areas of phonology to the students and practitioners of speech-language pathology and is a companion volume to the authors’ Phonetics for Communication Disorders.

Perspectives on Individual Differences Affecting Therapeutic Change in Communication Disorders

Amy L. Weiss (Ed.)
University of Rhode Island, USA

New Directions in Communication Disorders Research Series

This volume examines the ramifications of individual differences in therapy outcomes for a wide variety of communication disorders. In an era where evidence-based practice is the clinical profession’s watchword, each chapter attacks this highly relevant issue from a somewhat different perspective. In some areas of communication disorders, considering the variance brought by the client into the therapeutic ‘mix’ has a healthy history, whereas in others the notion of how individual client profiles mesh with therapy outcomes has rarely been considered.

Through the use of research results, case study descriptions and speculation, the contributors have creatively woven what we know and what we have yet to substantiate into an interesting collection of summaries useful for therapy programming and designing clinical research.

School success in the 21st century requires proficiency with expository discourse – the use and understanding of informative language in spoken and written modalities. This occurs, for example, when high school students read their textbooks and listen to their teachers’ lectures, and later are asked to demonstrate their knowledge of this complex topic through oral reports and essay examinations. Although many students are proficient with the expository genre, others struggle to meet these expectations. This book is designed to provide information on the use and understanding of expository discourse in school-age children, adolescents, and young adults. Recently, researchers from around the world have been investigating the development of this genre in typical students and in those with language disorders. Although many books have addressed the development of conversational and narrative discourse, by comparison, books devoted to the topic of expository discourse are sparse.

This cross-disciplinary volume fills that gap in the literature and makes a unique contribution to the study of language development and disorders. It will be of interest to a range of professionals, including speech-language pathologists, teachers, linguists, and psychologists who are concerned with language development and disorders.
Handbook of Child Language Disorders

Richard G. Schwartz (Ed.)
New York University, USA

“This text is an excellent reference book and one well worth having.” - Barbara Y. Whitman in PsycCRITIQUES

“This handbook is exceptional! It creatively examines issues intrinsic to the nature, assessment and remediation of language disorders in children. Original presentation and arrangement of information makes it very readable, albeit intellectually demanding. ... This is enlightening and practically informative on the bases and contexts of specific language impairments on the autistic spectrum. ... This is a ‘must’ for everyone involved with children who have a language disorder, clinicians, researchers, students or teachers. A comprehensive resource which has successfully brought state of the art, contemporary information together in one compact handbook.” - Briege McClean in Speech & Language Therapy in Practice

CONTENTS
Understanding Developmental Language Disorders

From Theory to Practice

Courtenay Frazier Norbury, Speech-language Pathologist, UK; J. Bruce Tomblin, University of Iowa, USA; Dorothy V.M. Bishop, University of Oxford, UK

“This book will be useful for students, researchers and practising therapists of all levels of experience working with children and adolescents with developmental language disorders. I will also be sharing the findings with colleagues in education, psychology and health.” - Caroline Booth, specialist speech and language therapist working with the Assessment and Intervention Team (Early Years and School Age) for Wandsworth PCT in Speech & Language Therapy in Practice

“This is a book that should be obligatory reading for everyone working in the field of developmental language disorders. There are contributions by many of the top experts in the field of DLD – from those involved in diagnostic and intervention research to those working in the field of genetics and imaging. Together the individual contributors and the three editors have produced a clearly written, tightly structured and comprehensive volume that should become a true classic.” - Patricia Howlin, Professor of Clinical Child Psychology, Institute of Psychiatry, King's College London

This book summarizes the recent research developments in genetics and neuroimaging studies, assessment techniques and treatment studies to provide an overview of all aspects of developmental language disorders. Each chapter is written by a leading authority in the field in a format accessible to researchers, clinicians and families alike.

This book will be invaluable to students and researchers of speech-language pathology, psychology, psychiatry, linguistics and education. It will also be of interest to practicing speech-language pathologists, clinical psychologists, psychiatrists, educational psychologists, and teachers and parents of children with developmental language disorders.

Dementia
From Diagnosis to Management – A Functional Approach

Michelle S. Bourgeois, Florida State University, USA
Ellen Hickey, Dalhousie University, Nova Scotia, Canada

“Bourgeois and Hickey have achieved a remarkable combination of comprehensive scholarship and practical guidance for providing interdisciplinary interventions enhancing the functioning, and hence quality of life, of persons living with dementia. Communication and behavior are understood within the broader context of environments and relationships. This is a must-have book for practitioners.” - Barbara B. Shadden, University of Arkansas

This volume aims to serve as a reference manual and the starting point for those who want to provide life-enhancing services to persons with dementia, and to inspire the continued generation of quality research to demonstrate the value of cognitive-communication intervention. Students, researchers, and practitioners in communication sciences and disorders will find this book immensely important.

Explaining Individual Differences in Reading

Theory and Evidence

Susan A. Brady, University of Rhode Island & Haskins Laboratories, USA; David Braze, Haskins Laboratories, USA; Carol A. Fowler, University of Connecticut & Haskins Laboratories, USA (Eds.)

Research into reading development and reading disabilities has been dominated by phonologically guided theories for several decades. In this volume, the contributors report on a wide array of current research topics, examining the scope, limits and implications of a phonological theory.

The chapters are organized in four sections. The first concerns the nature of the relations between script and speech that make reading possible, considering how different theories of phonology may illuminate the implications of these relations for reading development and skill. The second set of chapters focuses on phonological factors in reading acquisition that pertain to early language development, effects of dialect, the role of instruction, and orthographic learning. The third section identifies factors beyond the phonological that may influence success in learning to read by examining cognitive limitations that are sometimes co-morbid with reading disabilities, contrasting the profiles of specific language impairment and dyslexia, and considering the impact of particular languages and orthographies on language acquisition. Finally, in the fourth section, behavioral-genetic and neurological methods are used to further develop explanations of reading differences and early literacy development.

The volume is an essential resource for researchers interested in the cognitive foundations of reading and literacy, language and communication disorders, or psycholinguistics; and those working in reading disabilities, learning disabilities, special education, and the teaching of reading.

CONTENTS

Recovery from Stuttering

Peter Howell
University College London, UK
Language and Speech Disorders Series

“This book is a signal publication on stuttering. Peter Howell has given us a carefully researched and sensitively interpreted analysis of what is known about recovery from stuttering. The author assembles available evidence into logical categories that permit a reasoned and careful examination of factors that contribute to recovery, whether spontaneous or through clinical intervention. A remarkable feature of this book is that it is comprehensive but never cumbersome. The author deftly reviews data and theory in a way that is fluid, focused and fair-minded. Anyone interested in the contemporary understanding of stuttering will benefit from reading this book.” - Raymond D. Kent, Professor Emeritus at the University of Wisconsin-Madison, and former Vice President for Research and Technology of the American Speech-Language-Hearing Association

This book is a comprehensive guide to the evidence, theories, and practical issues associated with recovery from stuttering in early childhood and into adolescence. It examines evidence that stuttering is associated with a range of biological factors – such as genetics – and psychological factors – such as anxiety – and it critically assesses theoretical accounts that attempt to integrate these findings. Written so that it can be used flexibly to meet the demands of courses about stuttering, the book may be used as a text at the undergraduate or graduate level in psychology or speech-language science.

Cluttering

A Handbook of Research, Intervention and Education

David Ward, The University of Reading, UK
Kathleen Scaler Scott, Misericordia University, USA (Eds.)

“Erudite, enlightened and enlightening: this handbook shows how cluttering – the ‘adopted orphan’ – is cherished by a passionate scientific global community, confidently asking appropriate questions, with the integrity to answer ‘we don’t know it all’. … The complexity in cluttering is clear, with clarity presented about what we do know of its nature, its impact, and about meaningfulness and function in the management of cluttering.” - Margaret Leahy, Senior Lecturer in Clinical Speech and Language Studies, Trinity College Dublin, Ireland

This book treats cluttering as a serious communication disorder in its own right, providing an in-depth examination of the critical factors surrounding its assessment, treatment and research.

Using evidence-based data as well as information regarding the assessment and treatment of cluttering within the field of speech-language pathology, the volume includes the latest research findings and work from leading cluttering experts, worldwide. Current viewpoints regarding cluttering, along with substantiated evidence, are provided. Research findings are presented regarding the nature and neurology of cluttering. A range of assessment and treatment methodologies are described in the context of disorders which may co-occur with cluttering, such as autism spectrum disorders, learning disabilities, Down Syndrome and stuttering. Future directions with regards to the definition, teaching and researching of cluttering are also addressed.

Clinicians, faculty members, researchers, students in the field of speech pathology, and those who clutter, alike, will find this book an essential and unique source of information on cluttering.

CONTENTS

January 2011: 6x9: 272pp
Hb: 978-1-84872-029-9: £44.95
www.languagedisordersarena.com/9781848720299
Agrammatic aphasia refers to brain damage that affects the grammatical level of language. Since languages differ in their grammatical structure, each particular language can be affected differently depending on its specific structure. Research on agrammatic aphasia is therefore of great interest and importance to linguists, neuropsychologists, neurologists and speech and language pathologists from all over the world. It is studied from these diverse perspectives, but with one common goal: to understand how language is represented in the brain and what happens when brain damage means language use is no longer automatic.

The chapters in this book focus on the symptoms that arise in agrammatic aphasia at the lexical, morphological and sentence level. They also look at these impairments from linguistic, processing and neurological perspectives. Special attention is given to the possible treatments of these symptoms and to the neurobiological changes that can result from the treatments.

*Perspectives on Agrammatism* provides an up-to-date overview of the research that has been done over the past two decades. With contributions from the most influential aphasiologists from Europe and the United States, it provides an indispensible reference for students and academics in the field of language disorders.

Talking Heads

The Neuroscience of Language

Gianfranco Denes, Universities of Padua and Venice, Italy

Translated by Philippa Venturelli Smith

“In this admirably concise though comprehensive book, Gianfranco Denes brings together all the perspectives on the representation of language in the human brain. He introduces the reader to the evidence from neurology, neuroimaging, studies of brain-damaged people and linguistic theory, covering all of the major issues. This is a very valuable introduction that should encourage students from a wide range of disciplines to explore these issues, and will complement courses in speech and language pathology, psychology and linguistics.” - David Howard, Research Professor, Centre for Research in Linguistics and Language Sciences, Newcastle University, UK

Denes and Smith adopt a biolinguistic approach to the study of a subject that sees the collaboration of linguists, experimental psychologists, neuroscientists and clinicians. The book illustrates the neurological process involved in the production of written language, as well as investigating the neurological systems responsible for sign language production and second language acquisition.

The book reviews the latest research on the nature, structure and origin of language to provide a concise analysis of the multifaceted aspects of language which focuses both on theoretical aspects and physical implementation. With a glossary of the anatomical and linguistic terms, this book provides an invaluable resource to undergraduate and graduate students of Psychology, Psycholinguistics and Linguistics. It will also be of interest to neurologists, speech therapists and anyone interested in the mind-brain problem.

Reading and Dyslexia in Different Orthographies

Nicola Brunswick, Middlesex University, UK; Siné McDougall, Bournemouth University, UK; Paul de Mornay Davies, Middlesex University, UK (Eds.)

“This book contains much of interest to the student of reading, and brings together considerable expertise on cross-linguistic differences in a single volume. I would recommend this book to anyone interested in obtaining a better understanding of how orthographies differ across languages and the implications for learning to read.” - Colin J. Davis, Reader in Cognitive Psychology, Royal Holloway, University of London, UK

This book provides a unique and accessible account of current research on reading and dyslexia in different orthographies. Bringing together contributions from a group of leading literacy researchers from around the world, it is ideal reading for advanced undergraduates and postgraduates who have an interest in language acquisition, reading and spelling, as well as speech and language therapists, teachers and special educational needs professionals.

How Children Learn to Read
Current Issues and New Directions in the Integration of Cognition, Neurobiology and Genetics of Reading and Dyslexia Research and Practice

Ken Pugh & Peggy McCadle (Eds.)
National Institute of Child Health and Human Development, USA
Extraordinary Brain Series

“This volume is a valuable contribution to our growing understanding of the biological and cognitive bases of dyslexia. We believe that researchers in neuroscience, genetics, and cognitive science will find useful summaries of current research in these areas. Reading instructors looking for current research that is relevant to the development of intervention programs will find the volume challenging but rewarding.” - David W. Carroll and Debora P. Carroll in *PsycCRITIQUES*

This book brings together in one volume information about the neurobiological, genetic, and behavioral bases of reading and reading disabilities. In recent years, research on assessment and treatment of reading disability (dyslexia) has become a magnet for the application of new techniques and technologies from neuroscience, cognitive psychology, and cognitive neuroscience. This interdisciplinary fusion has yielded numerous and diverse findings regarding the brain basis of this syndrome, which are discussed in this volume by leading researchers. Intervention approaches based on such research are presented. The book also calls for research in specific directions, to encourage the field to continue moving into the bold frontier of how the brain reads.

The volume is essential reading for a range of researchers, clinicians, and other professionals interested in reading and reading disability, and also commemorates the tenth anniversary of the Extraordinary Brain Conferences hosted by The Dyslexia Foundation.

Scoring Software for the Comprehensive Aphasia Test

Robin Keith, University of East Anglia, UK
Elise Croot, Speech and Language Therapist, private practice, UK

The Scoring Software for the Comprehensive Aphasia Test makes scoring CAT assessments easy. Enter results from the CAT scoring book into the easy-to-use spreadsheet and the software instantly calculates totals and t-scores and produces three graphs that can be shared with clients and their families. Scoring sheets can be stored electronically, printed, or embedded into reports.

Benefits for therapists, their clients, and NHS departments include:

- Significantly reduces the time spent scoring
- Simplifies the process of scoring, calculation, interpretation and analysis of results, and improves accuracy
- Allows data entry to be completed by an assistant, freeing the therapist to concentrate on therapy
- Encourages calculation of t-scores and production of graphs
- Offers visual representation of test results which highlights the client’s strengths and needs instantly
- Electronic documents enable modern filing, transfer between clinicians sharing caseloads, consistency, and easy submission into reports.

This resource will be an asset to any clinician using the Comprehensive Aphasia Test.

Software Requirements: Requires a PC with Microsoft Excel 2003 or later installed. You need to purchase a copy of the software for each user who will be using it in your organization. You can share completed scoring sheets with colleagues, but they won’t be able to edit them without their own copy. You can read the current license agreement online.

Aphasiology

5-year Impact Factor: 1.095 (© 2010 Thomson Reuters, 2009 Journal Citation Reports®)

EDITOR
Professor Chris Code, Exeter University, UK

Aphasiology is concerned with all aspects of language impairment and disability and related disorders resulting from brain damage. It provides a forum for the exchange of knowledge and the dissemination of current research and expertise in all aspects of aphasia and related topics, from all disciplinary perspectives. Aphasiology includes papers on clinical, psychological, linguistic, social and neurological perspectives of aphasia. Studies using a wide range of empirical methods, including experimental, clinical and single case studies, surveys and physical investigations are published in addition to regular features including major reviews, clinical fora, case studies, and book reviews.

Submission Procedures
All submissions should be made online at Aphasiology’s ScholarOne Manuscripts submission site: http://mc.manuscriptcentral.com/paph. Prior to submission, read the full Instructions for Authors at the journal’s website below.

Free Article: A proposed reinterpretation and reclassification of aphasic syndrome by Alfredo Ardila (Vol. 24:3 363 – 394) Read this article in full online: http://bit.ly/aphaprop

Special Issues
Sent free to subscribers as part of their subscription, and available for individual purchase to non-subscribers.

The 39th Clinical Aphasiology Conference
Guest Editor: Beth Armstrong. This year’s special issue contains papers presented at the 39th Clinical Aphasiology Conference held in Keystone, Colorado in May, 2009. The issue contains another excellent mix of articles, demonstrating the depth and breadth of issues covered in clinical aphasiology at the present time.

Free Article: Introduction to the 39th Clinical Aphasiology Conference by Beth Armstrong (Vol. 24:6-8, 669) Read this article in full online: http://bit.ly/aphintro

ISBN: 978-1-84872-738-0 £42.50

A Tribute to the Quintessential Researcher, Clinician, and Mentor: Audrey Holland
Guest Editor: Laura Murray

The purpose of this special issue is to honour Dr. Audrey Holland and her prolific research and clinical achievements over the past 50 years. It is constructed to exemplify the breadth of Dr. Holland’s influence not only in terms of research topics (e.g., aphasia, dementia, research methodology) but also geographic span, with contributing authors from around the globe.

Free Article: A Tribute to the Quintessential Researcher, Clinician, and Mentor: Audrey Holland by Laura Murray (Vol. 24:4, 427-429) Read this article in full online: http://bit.ly/aphatrib

ISBN: 978-1-84872-733-5 £29.95

Issues in Bilingual Aphasia
Guest Editor: Brendan Weekes
This special issue presents papers by leading researchers in the field of aphasia and to examine the patterns of speech and language disorders among speakers who have varying proficiency in their native and non-native languages.

ISBN: 978-1-84872-732-8 £29.95

Progressive Language Impairments: Intervention and Management
Guest Editors: Lyndsey Nickels and Karen Croot
This volume focuses on intervention for progressive language impairments, providing an overview of current research and including examples of interventions at different levels (e.g., impairment-directed interventions, activity/participation-directed interventions).

ISBN: 978-1-84872-701-4 £45.00

Evidence-Based Communication Assessment and Intervention

EDITORS
Ralf W. Schlosser, Northeastern University, USA
Jeff Sigafoos, Victoria University of Wellington, New Zealand

Evidence-Based Communication Assessment and Intervention (EBCAI) brings together professionals from several disciplines to promote evidence-based practice (EBP) in serving individuals with communication impairments. We target speech-language pathologists, special educators, regular educators, applied behavior analysts, clinical psychologists, physical therapists, and occupational therapists who serve children or adults with communication impairments.

We select and appraise the latest and highest quality studies and reviews related to assessment, intervention, diagnosis, and prognosis published across 60+ professional journals in speech-language pathology and related fields. We make these appraisals accessible through value-added structured abstracts that include expert commentary about the quality of the evidence as well as its practical implications. This affords the practitioner a one-stop reading experience to stay on top of research findings in order to facilitate evidence-based decision-making.

Researchers and university professors will benefit from access to cutting-edge and clinically relevant studies. EBCAI also provides a forum for the dissemination of original research and discussion of methodologies and concepts that advance EBP as well as of experiential accounts of relevant stakeholders involved in the EBP process.

Submission Procedures
Submissions from Europe, North America, and South America should be submitted to Professor Ralf Schlosser (r.schlosser@neu.edu); submissions from Africa, Asia, and the Australia/New Zealand region should be sent to Professor Jeff Sigafoos (Jeff.Sigafoos@vuw.ac.nz). Prior to submission, read the full Instructions for Authors at the journal’s website below.

Special Issue
Sent free to subscribers as part of their subscription, and available for individual purchase to non-subscribers.

Teaching Evidence-Based Practice
Guest Editors: Ralf Schlosser and Jeff Sigafoos
This special issue is the first in a peer-reviewed journal in the field that focuses on the teaching of EBP at the pre-professional level! We believe that this issue will serve as a catalyst for increased scholarly discourse on this critical need.

Free Article: Case-based learning: One route to evidence-based practice by Patricia McCabe, Alison Purcell, Elise Baker, Catherine Madill, David Trembath (Vol. 3:4, 208 – 219) Read this article in full online: http://bit.ly/evicase

Volume 3, Issue 4 (2009)
ISBN: 978-1-84872-730-4 £24.95

Free Access to EBCAI for one month!
Get one month’s free online access to EBCAI with this Voucher Code. Enter the code below on your Informaworld account and for the next thirty days you will have complete online access to EBCAI’s latest issue and full archive.

It’s simple:
Step 1: Go to www.informaworld.com/tebc and Sign-In, or click ‘register’ to create your Informaworld account.
Step 2: Click ‘Got a Voucher?’
Step 3: Enter the following number in the ‘Voucher Code’ field:

VTEBC300001A321

This code can be claimed for any 30-day period up until the end of 2011. One voucher claim per email address – this voucher offer is open to Informaworld personal account users only. Email journals@psypress.com if you have any queries.

Full details, current subscription rates, notes for authors, submission procedures and complete online contents are available at the journal’s website:
